

# Curve Fitting

What is the “best fit”?

Distance vs. Time for a Moving Object

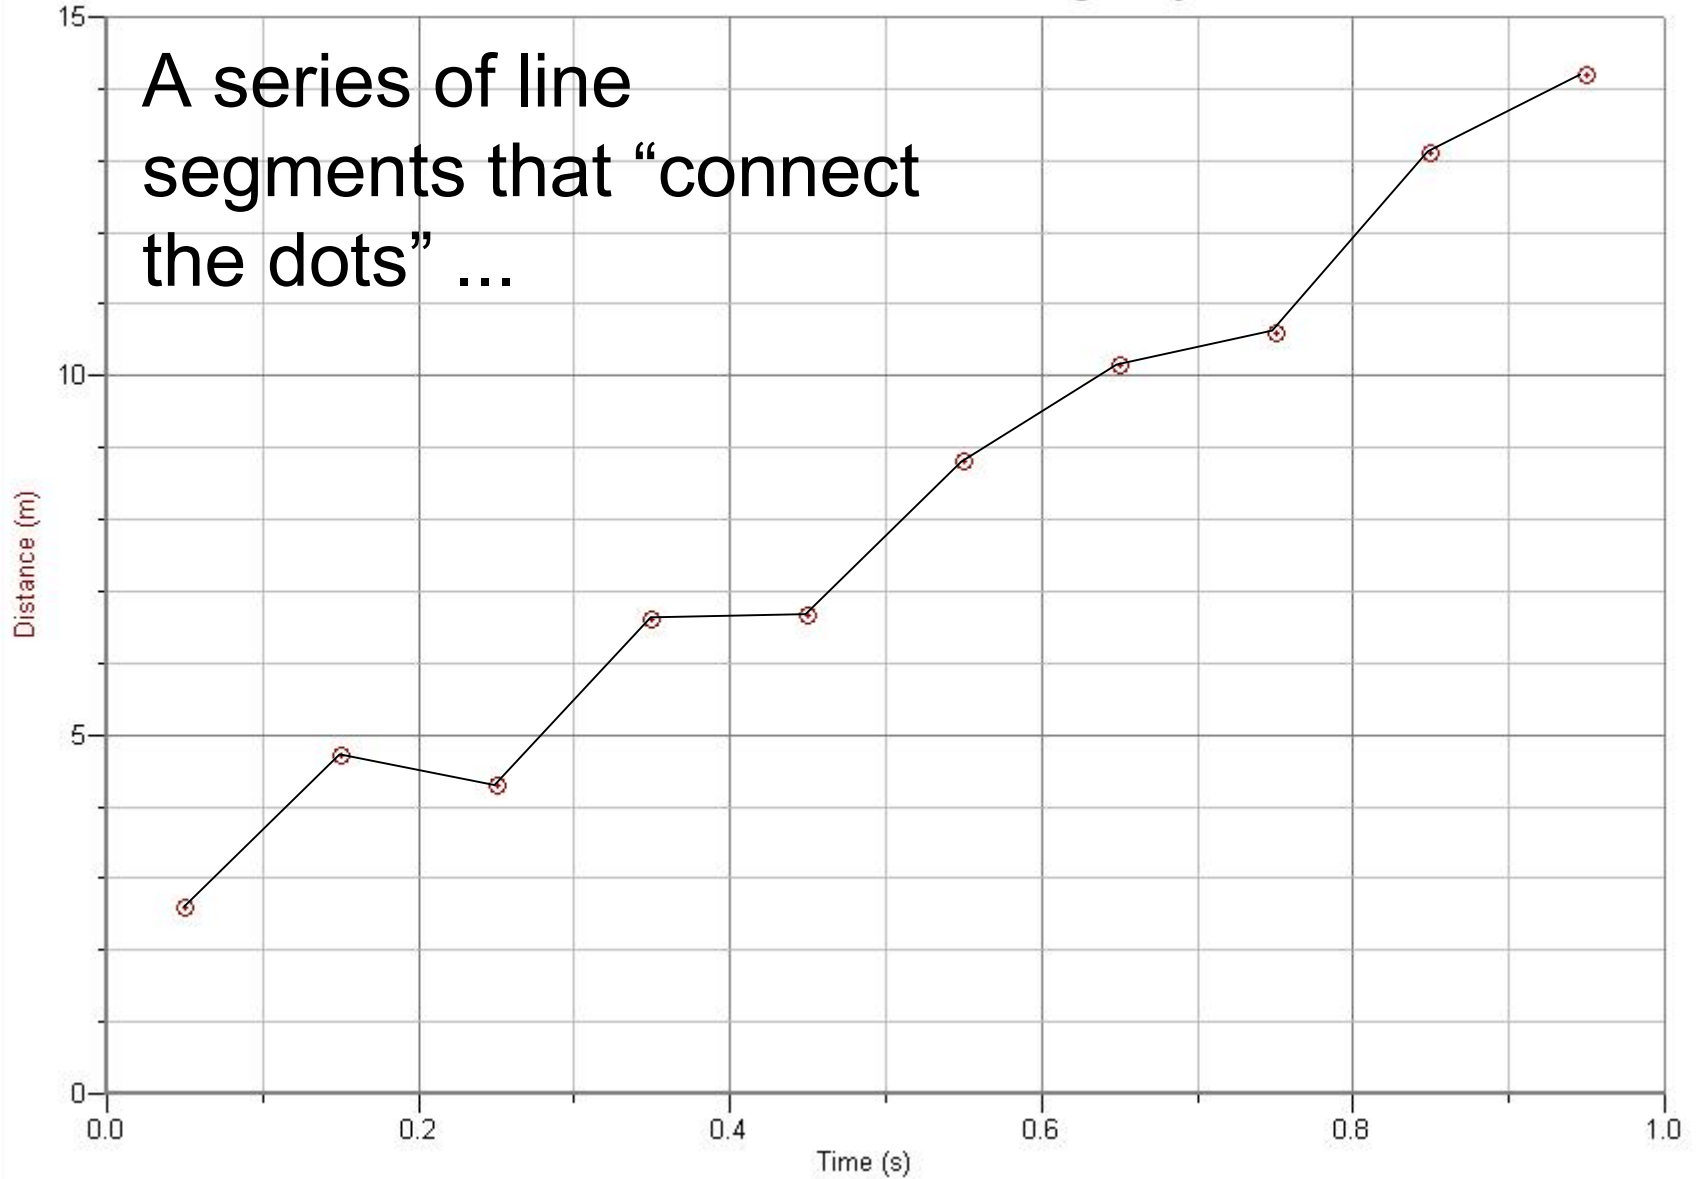

Which of the following is  
the *best* fit to the data?

(0.983, 5.19)

Distance vs. Time for a Moving Object

A series of line segments that “connect the dots” ...

(0.983, 5.19)

# Distance vs. Time for a Moving Object

... a line that connects the first and last points ...

(0.983, 5.19)

Distance vs. Time for a Moving Object

... a line that starts at the origin and passes through the data midway ...

$$d = 15.83t$$

(0.983, 5.19)

Distance (m)

Time (s)

Distance vs. Time for a Moving Object

... a line that is *very close* to 5 of the data points ...

(0.983, 5.19)

Distance vs. Time for a Moving Object

... a line that is placed  
so that the average  
distance to the data is  
minimized ...

(0.983, 5.19)

## Distance vs. Time for a Moving Object

... or a *curve* that matches the data *perfectly*?

# Curve Fitting Basics:

- Because experimental data *always* contain error, “connecting the dots” on a graph is seldom done in science.
- Instead a line or curve is chosen that shows the most likely *actual* relation between variables (allowing for error or scattering of the data).
- The line or curve may or *may not* actually pass through data but rather “fits” the data as well as possible.

# Distance vs. Time for a Moving Object

*This is the best fit!*

(0.983, 5.19)

Is it better to judge the best fit by eye  
**or** by calculation?

(*i.e.* by human judgment or by  
statistical analysis?)

Consider the following four sets of  
data that all have the *same*  
regression and statistical results.  
(Developed by a statistician named  
Anscombe to make a point...)

# Anscombe I

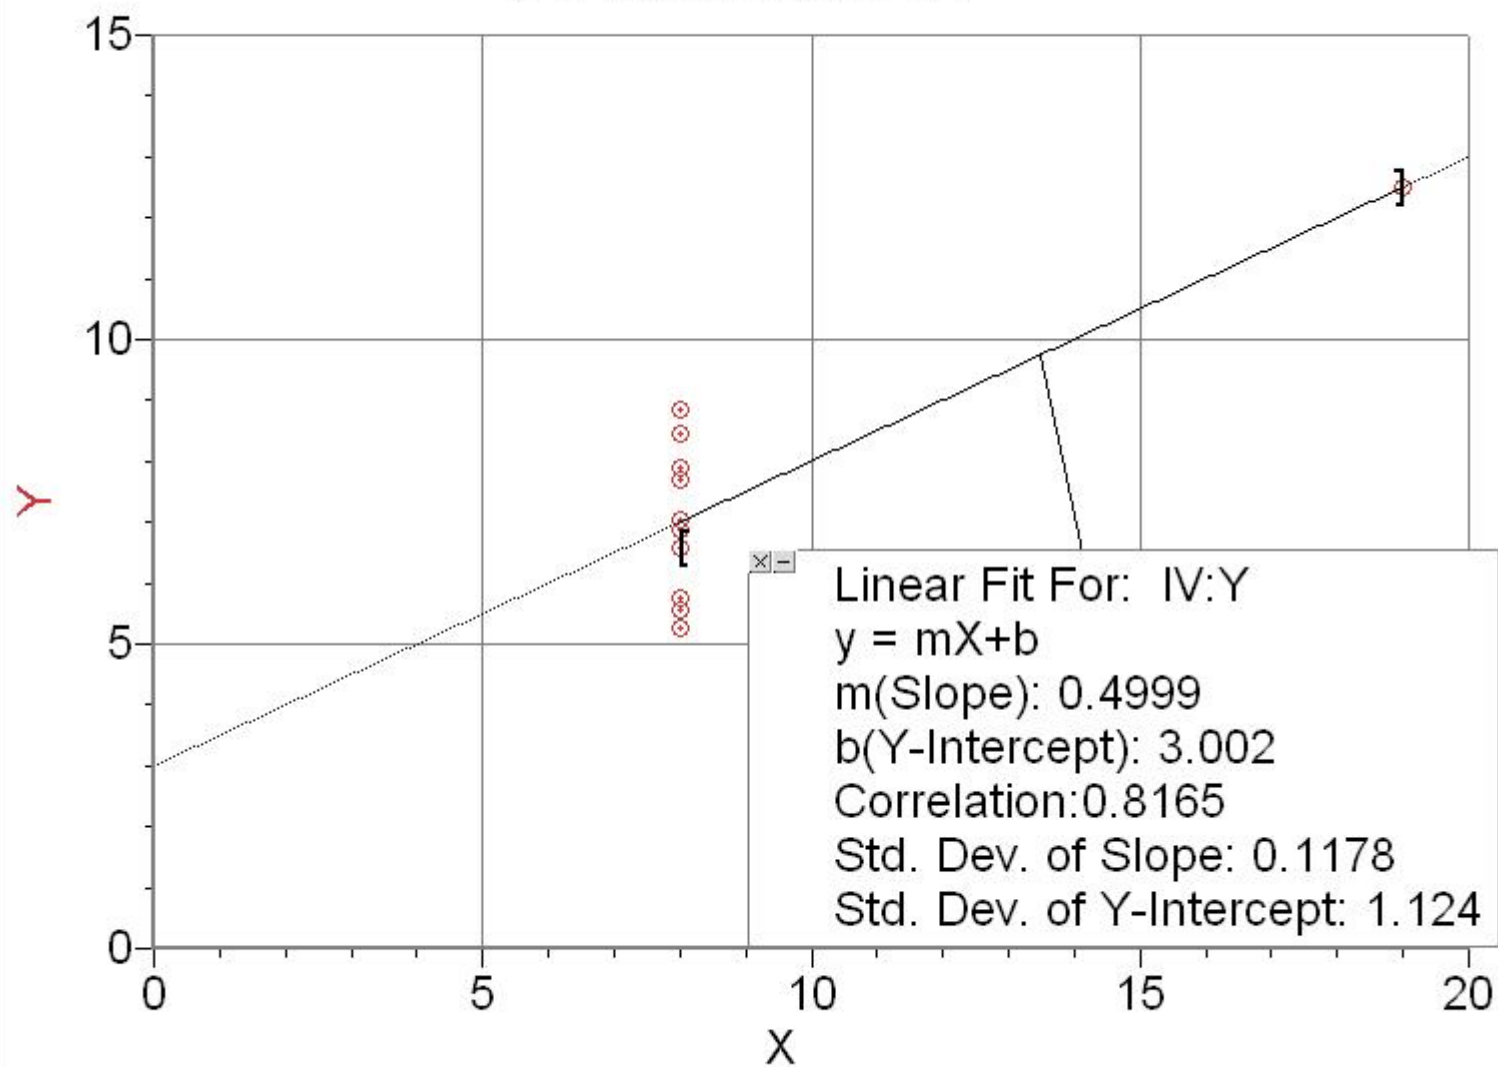

# Anscombe II

# Anscombe III

# Anscombe IV

Do not underestimate the ability of your mind's eye to recognize patterns!

Based on statistics and number crunching all four fits are equal.

But, the “mechanical” statistical result would be appropriate only for the first of the “Anscombe Quartet”.

## Anscombe II

This is obviously a  
curve ...

## Anscombe II

## Anscombe III

## Anscombe III
